### III) Part Three: Reading Comprehension

#### What Animals Are Endangered?

Many Kinds of Tigers are Endangered Animals: There are nine different types of tigers. Three of these kinds are extinct. The Siberian Tiger is one that scientists are very concerned about, because they may become extinct in the immediate future, due to their few numbers left in the wild. There are so few, that they are classified as critically endangered. There is only one type of tiger that is more endangered than the Siberian Tiger, which is the South China Tiger.

The South China Tiger is one of the ten most endangered animals in the entire world. There is believed to be only fifty-nine South China Tigers alive, and none live in their original habitat. This means they are extinct in the wild.

Bengal Tigers are another endangered animal, but unlike the South China Tiger, they still live in the wild. They believe that there is less than two thousand. That is less tigers than people who live in most cities.

**A Answer the questions.**

به سوالات پاسخ دهید.
